

RoHS Policy

We certify that Amuse is fully committed to RoHS (Restriction of Hazardous Substances) Directive 2015/863 compliant. Our manufacturing processes strictly adhere to RoHS standards, ensuring our products are free from hazardous substances as outlined by the directive.

Understanding our role in this framework, we acknowledge that as a custom manufacturer specializing in prototypes and component parts, we do not directly manufacture electrical or electronic equipment. Our focus is on creating custom, on-demand parts based on the unique designs and material choices of our clients. Given the diverse range of industries we serve, we believe it's our clients' responsibility to specify materials that comply with regulatory requirements such as RoHS.

To support our clients, we actively engage in providing information about the RoHS status of materials used in manufacturing their parts. This involves a collaborative effort with our suppliers to obtain accurate declarations about the RoHS compliance of the materials supplied to us. We have established systems to ensure we receive up-to-date declarations, especially following any changes in regulations. We then meticulously assess the data for all materials used in each custom part and provide informed responses.

It is important to note that the majority of materials we offer at Amuse are RoHS compliant, not containing hazardous substances above the specified thresholds.

In summary, we maintain meticulous control over materials, manufacturing processes, and employee training to guarantee RoHS compliance. This certificate attests to our dedication to producing environmentally friendly and safe products.

For any further information or inquiries regarding our RoHS compliance, please feel free to contact us.
